

TASK 1

Data Types and Variables:

- A) Given a temperature in Fahrenheit, write a program to convert it to Celsius.
- B) Write a program that calculates the area of a circle given the radius.

Output/Input in Python:

- A) Write a program that prompts the user to enter their name and prints a greeting message.
- B) Given a person's age, write a program that calculates and prints their birth year.
- C) Write a program that prompts the user to enter the length and width of a rectangle, and then calculates and prints its area.

Mathematical Operations:

- A) Given two numbers, write a program that performs arithmetic operations such as addition, subtraction, multiplication, and division.

String:

- A) Write a program that prompts the user to enter their name and then prints it in reverse order.
- B) Write a program print only if "expensive" is NOT present:

```
txt = "The best things in life are free!"
```
