

TASK 3

Task: For Loop

1. Write a Python program to extract the usernames from a given set of email addresses and Print them.

- **Sample Input:**

```
- emails = {  
    "john.doe@org.ud.com",  
    "jane.smith@yahoo.com",  
    "alice123@example.com",  
    "bob_c@gmail.com",  
    "david123@gmail.com"  
}
```

- **Expected Output:**

```
- john.doe  
- jane.smith  
- alice123  
- bob_c  
- david123
```

2. Given a list of student names, print the length of each name. •

- **Sample Input:**

```
- students = ["Alice", "Bob", "Charlie", "David", "Eve"]
```

- **Expected Output:**

```
- Length of Alice: 5  
- Length of Bob: 3  
- Length of Charlie: 7  
- Length of David: 5  
- Length of Eve: 3
```

Task: Function

1. Given a list of numbers, write a function to calculate the sum of squares of all the even numbers in the list.

- **Sample Input:**

- numbers = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]

- **Output:**

- Sum of squares of even numbers: 220

2. Write a function that simulates the built-in `abs()` function.

- **Sample Input:**

- num = -5

- **Output:**

- Absolute value of -5: 5

3. Write a function that takes a list of temperatures in Celsius as input and converts them to Fahrenheit using the formula $F = (C * 9/5) + 32$, the function should return a list of temperatures in Fahrenheit.

- **Sample Input:**

- temperatures = [0, 25, 37, -10, 100]

- **Output:**

- Fahrenheit temperatures: [32.0, 77.0, 98.6, 14.0, 212.0]
