

TASK Numpy

1. Random Numbers & Array Creation

- Generate a **1D array** of **20 random integers** between 10 and 100 using NumPy.
- Print the array.

2. Indexing

- Print the **first 5 elements** of the array.
- Print the **last 3 elements**.
- Print the elements at **even indices** only.

3. Arithmetic Operations

- Create another array of the same shape with random integers between 1 and 10.
- Perform and print the results of:
 - Addition
 - Subtraction
 - Multiplication
 - Division

4. Reshape

- Reshape the first array (20 elements) into a **4x5 matrix**.
- Print the reshaped array.
- Access and print:
 - The second row
 - The last column
 - A sub-matrix of the first 2 rows and first 3 columns
