

Pandas Task

You will work with the ramen-ratings dataset, which contains information about instant ramen reviews.

👉 Download from [Kaggle](https://www.kaggle.com/datasets/residentmario/ramen-ratings). <https://www.kaggle.com/datasets/residentmario/ramen-ratings>

Questions

1. Read CSV File

1. Import the required libraries (pandas).
2. Read the dataset (ramen-ratings.csv) into a DataFrame and display the first 5 rows.

2. Index Selection and Label Selection

1. Select the **first 10 rows** of the dataset using:
 - Index selection (iloc)
 - Label selection (loc)
2. From row **2560 to 2565**, select only the columns **Brand** and **Stars**.

3. Conditional Selection

1. Select all rows where the **Country** is "Japan".
2. Find all rows where the **Stars** rating is greater than or equal to **4.5**.
3. Get all ramens where the **Style** is "Cup" and the **Country** is "USA".

4. Assign New Column

1. Create a new column called **Rating_Category**:
 - If Stars $\geq 4 \rightarrow$ "Excellent"
 - else $\rightarrow$ "Good"
2. Show the first 10 rows with the new column.

Deliver your solution as a **Jupyter Notebook (.ipynb)** file.
