

Python Task

Data Visualization Practice

Practice using different types of charts to visualize datasets.

Dataset:

1. Monthly Sales (for Line Chart):

```
months = ["Jan", "Feb", "Mar", "Apr", "May", "Jun"]
```

```
sales = [1200, 1500, 1700, 1600, 1800, 2000]
```

2. Product Revenue (for Bar Chart):

```
products = ["Laptops", "Mobiles", "Tablets", "Accessories"]
```

```
revenue = [35000, 50000, 15000, 10000]
```

3. Market Share (for Pie Chart):

```
languages = ["Python", "Java", "C++", "JavaScript"]
```

```
popularity = [40, 25, 20, 15]
```

Tasks:

1. Line Chart:

- Plot a line chart showing the sales trend over 6 months.
- Add markers and labels for the axes (Months, Sales).
- Title it **"Monthly Sales Trend"**.

2. Bar Chart:

- Create a bar chart comparing revenue from different product categories.
- Label the axes (Products, Revenue).
- Title it **"Revenue by Product"**.

3. Pie Chart:

- Create a pie chart showing programming language market share.
- Add percentages inside the chart.
- Title it **"Programming Language Market Share"**.
