

Survey Analysis Dashboard using Power BI

Complete the full project by building a **Survey Analysis Dashboard** using Power BI.

Your dashboard should answer the following business questions:

Key Performance Indicators (KPIs)

Create KPI cards to display:

- Total Number of Voters
 - Average Salary
 - Minimum Salary
 - Maximum Salary
 - Average Age
 - Minimum Age
 - Maximum Age
-

Distribution Analysis

Create appropriate visualizations (e.g., bar charts, column charts, pie charts) to analyze:

- Number of Voters per Country
 - Number of Voters per Job Title
 - Number of Voters per Education Level
 - Number of Voters per Ethnicity
 - Number of Voters per Gender
 - Number of Voters who Switched to a Data Career
-

Professional & Career Insights

Build visuals to show:

- Number of Voters per Programming Language
- Number of Voters per Industry

- Number of Voters by Status of Breaking into Data
 - Number of Voters per Most Important Career Factor
-

Satisfaction Analysis

- Number of Voters per Satisfaction Level
-

Final Requirement

- Design a clean, interactive dashboard.
- Apply appropriate filters and slicers.
- Ensure visuals are clear, well-labeled, and formatted professionally.
- Deliver a fully functional Power BI report (.pbix file).
